PERFORMANCE APPRAISAL

WORK SUMMARY

Employee: Manivasagan A.

Role: Full Stack Developer

Period: July 2026 - October 2026

Company: Lords and Kings Enterprises Pvt. Ltd.

1. Overall Contribution

During this period, I worked on multiple web, mobile, gaming, financial, and internal business applications. My responsibilities included frontend and backend development, database integration, multiplayer functionality, payment integrations, security testing, bug fixing, deployment, Android/iOS application conversion, and integration between multiple independent platforms.

I also regularly analyzed reported bugs, implemented new requirements provided by HR and project teams, tested applications, and resolved deployment and production-related issues.

2. Attendance Management Application

Worked on the development and improvement of the Lords and Kings Attendance Application.

Key Contributions

- Analyzed application requirements.
- Developed both **Admin and Employee modules**.
- Implemented database connectivity.
- Implemented employee ID management.
- Added office leave information to the database.
- Fixed attendance-related bugs.
- Fixed **date and time spoofing issues**.
- Worked on protection against **location spoofing**.
- Added application **version control**.
- Converted the web application into an **Android application**.
- Converted the application into a **Windows EXE** for HR use.
- Performed repeated testing and debugging.

Result

Delivered an attendance solution that could be used across web, Android, and Windows environments with improved security and reliability.

3. Security Application / Existing System Maintenance

Worked on testing and improving existing internal applications.

Issues Identified / Worked On

- Automatic logout issue.
- Monthly Duty Report download issue.
- Dark theme visibility problems.
- Missing sign-out confirmation.
- Incorrect leave date after approval.
- Incorrect time display.
- Incorrect attendance status in monthly calendar.
- Missing Guard and Location search filters.
- Missing guard In-Time photo.
- Login issues.
- Email delivery issues.
- KYC verification problems.
- Two-factor authentication issues.

I regularly performed **security and vulnerability testing**, identified issues, implemented fixes, and retested the applications to improve security and stability.

4. MegaDraw Lottery Platform

Worked extensively on the architecture, administration system, integration, deployment, and production readiness of the Lottery Platform.

Admin Modules Worked On / Designed

- Reports & Financial Analytics
- User Management
- KYC Management
- Affiliate Management
- Games Management
- Draw Management
- Wallet & Deposits
- Withdrawals
- CMS & Banner Management
- Audit Logs
- Support Center
- System Settings
- Roles & Permissions

Enterprise Features

Worked on planning and implementing advanced access-control concepts including:

- Permission matrix.
- Role templates.
- User-role assignment.
- Role cloning and comparison.
- Temporary permissions.
- Approval workflows.
- Permission history.
- Session management.
- IP/device restrictions.
- Emergency access.
- Feature flags.
- User access simulation.

Deployment & Architecture

- Reviewed Docker-based deployment.
- Evaluated PostgreSQL migration to **Supabase Cloud**.
- Worked with **React + Fastify + PostgreSQL/Supabase** architecture.
- Reviewed Redis requirements.
- Re-hosted the Lottery Platform.
- Resolved hosting and deployment issues.
- Integrated the Lottery Platform with the Coupon Platform through APIs.

5. Coupon Management / Coupon Vault Platform

Worked on the Coupon Management System as an independent financial and coupon-management application.

Core Contributions

- Designed secure coupon redemption flow.
- Implemented wallet funding through coupon redemption.
- Worked on coupon verification and validation.
- Implemented transaction history and audit tracking.
- Worked on referral system functionality.
- Added customer support and ticket management.
- Implemented two-step verification using:
  - Authenticator App
  - Email OTP

- Added withdrawal Email OTP verification.
- Fixed email delivery issues.

Payment Integrations

Worked on integrating:

- PayPal
- Razorpay
- Stripe

Resolved PayPal integration and wallet crediting issues.

International / Currency Features

- Implemented country-based currency handling.
- Worked on local currency management.
- Developed country-specific withdrawal/banking structures.
- Planned currency conversion for international users.

Platform Integration

Connected the Coupon Platform with:

- Gaming Hub
- Lottery Platform

Verified that all platforms could communicate and operate together through API-based integration without direct database sharing.

6. Gaming Hub - Multiplayer Gaming Platform

This has been one of my major projects during the appraisal period.

Worked on a multi-game platform supporting web, mobile, tournaments, wallets, multiplayer gameplay, and administration.

Multiplayer Development

Worked on multiplayer implementation for games including:

- Chess
- Ludo
- Snake and Ladder
- Carrom
- Snakes/Worms
- Cricket
- Table Tennis
- Snooker

Worked on:

- Multiplayer synchronization.
- Room management.
- Matchmaking.
- Player interaction.
- Turn management.
- Reconnect handling.
- Ready-check system.
- Synchronized countdown.
- Server-authoritative match start.
- Match lifecycle management.
- 10-minute automatic match termination.
- Multiplayer testing across mobile and desktop.

Game-Specific Work

Carrom

- Implemented multiplayer support.
- Fixed Carrom striker-related issues.
- Improved UI and gameplay.

Cricket

- Developed Cricket gameplay.
- Worked on batting/bowling role handling.
- Worked on innings management and multiplayer synchronization.
- Improved Cricket animations.
- Fixed Cricket-related bugs.

Snooker

- Added Snooker to the Gaming Hub.
- Modified gameplay according to requirements.
- Added an attack/power level bar.
- Tested and refined gameplay.

Table Tennis

- Redesigned and modernized the UI.

UI / Mobile Improvements

- Redesigned Gaming Hub UI.
- Implemented mobile-responsive layouts.
- Added mobile bottom navigation.

- Improved mobile sidebar behavior.
- Improved wallet UI.
- Added smooth animations and game card effects.
- Optimized games for different mobile screen sizes.
- Converted Gaming Hub into an **Android APK**.

7. Tournament System

Designed and implemented a major Tournament Management System within the Gaming Hub.

Features Worked On

- Tournament creation and management.
- Player participation.
- Entry-fee collection.
- Prize distribution.
- Refund management.
- Settlement tracking.
- Tournament notifications.
- Email alerts.
- Match time limits.
- Tournament scheduler.

Tournament Tiers

Implemented configurations for:

- Mini
- Basic
- Standard
- Premium
- Pro

Admin Analytics

Implemented or worked on:

- Tournament analytics.
- Financial analytics.
- Entry-fee analytics.
- Prize distribution analytics.
- Refund analytics.
- Settlement analytics.
- Player participation analytics.

- Player performance analytics.
- Win-rate analytics.
- Game-specific analytics.
- Tier performance trends.
- Tournament health monitoring.
- Stuck tournament detection.
- Scheduler monitoring.
- Notification analytics for Email, In-App and Socket.IO.

Result

Completed the Tournament System and maintained compatibility with the supported games, wallet/redeemed-coin system, and match time-limit functionality.

8. Gaming Hub Wallet & KYC

Worked on the financial interface of the Gaming Hub.

Implemented or designed:

- Deposit interface.
- Withdrawal interface.
- Wallet summary.
- Transaction history.
- Coupon redemption.
- Real-time balance handling.
- Withdrawal verification.
- KYC workflow.
- Document verification.
- Admin approval flow.
- Email OTP.
- Authenticator-based verification.

Focused on transaction security, audit logs, concurrency protection, and safe wallet operations.

9. Manpower Solutions / Hiring Platform

Worked on the company's Manpower Solutions and Employee Hiring applications.

Contributions

- Developed the Manpower Solutions page.
- Redesigned the UI multiple times according to HR requirements.
- Changed the design to match the main Lords and Kings company website.
- Improved consistency between company websites.

- Worked on responsive design.
- Started development of the Employee Hiring Application.
- Made modifications based on requirements provided by Ashok Sir.

10. Android, Windows & iOS Application Development

Expanded applications beyond traditional web development.

Android

- Converted Attendance Application into Android application.
- Converted Gaming Hub into Android APK.
- Tested application functionality on mobile.

Windows

- Converted Attendance Application into Windows EXE for HR use.

iOS / macOS

- Successfully configured and installed macOS environment.
- Resolved macOS installation problems.
- Converted the application for iOS.
- Used the setup to begin iOS-related development.

11. Security & Vulnerability Testing

Security testing has been a regular part of my work.

Worked on:

- Repeated security and vulnerability assessments.
- Authentication security.
- Two-factor authentication.
- Email OTP.
- Authenticator/TOTP.
- Login security.
- Withdrawal verification.
- KYC security.
- Location spoofing prevention.
- Date/time manipulation prevention.
- API security.
- Transaction validation.
- Application security testing.
- Fix verification and retesting.

I repeatedly tested applications after fixes to ensure vulnerabilities and reported issues were properly resolved.

12. Deployment & Production Support

Worked on deploying and maintaining multiple applications.

Contributions

- Hosted the Gaming Hub.
- Resolved Gaming Hub hosting issues.
- Re-hosted Lottery Platform.
- Re-hosted Coupon Platform.
- Connected Gaming Hub, Lottery Platform, and Coupon Platform.
- Tested simultaneous operation between these applications.
- Resolved hosting-time and deployment-related issues.
- Worked with Docker-based architecture.
- Worked with PostgreSQL and Supabase Cloud migration planning.
- Reviewed Redis requirements for scalable multiplayer architecture.

13. Bug Fixing & Team Support

Regularly handled bugs reported by team members including Hari, Harish, Harishneelan, Saiyed and others.

Examples include:

- Login issues.
- Email delivery issues.
- KYC issues.
- Referral system bugs.
- Game navigation/back button.
- Affiliate program issues.
- Carrom striker problems.
- Cricket game issues.
- Multiplayer synchronization issues.
- Hosting issues.
- Wallet/payment issues.

I analyzed the root causes, implemented fixes, tested the changes, and continued security validation after modifications.

14. Technologies & Skills Used

Frontend: React, TypeScript, JavaScript, Vite, responsive web development

Backend: Node.js, Fastify, REST APIs, Socket.IO

Database: PostgreSQL, Supabase, Prisma

Real-Time / Scaling: Socket.IO, Redis, multiplayer architecture

Deployment: Docker, Render, Supabase Cloud, production hosting

Mobile: Capacitor, Android APK, iOS application conversion

Payments: PayPal, Razorpay, Stripe

Security: 2FA, TOTP, Email OTP, KYC, API security, security testing, vulnerability testing

Other: Git/GitHub, responsive UI development, system integration, debugging, application architecture

Key Achievements

During this appraisal period, I progressed from working mainly on individual web application tasks to handling complete application modules involving:

Frontend + Backend + Database + API Integration + Multiplayer + Mobile + Deployment + Security.

Major achievements include:

- Built and enhanced the company Attendance Application across Web, Android and Windows.
- Contributed extensively to the MegaDraw Lottery Platform.
- Developed and integrated the Coupon Management Platform.
- Built major parts of the Gaming Hub multiplayer architecture.
- Implemented multiplayer functionality across several games.
- Completed a comprehensive Tournament System.
- Implemented payment, wallet, KYC and 2FA-related functionality.
- Worked on Android and iOS application conversion.
- Integrated three major platforms - **Gaming Hub, Coupon Platform and Lottery Platform**.
- Regularly performed security testing and production bug fixing.
- Handled deployment and resolved production hosting issues.
- Supported changes and bugs reported by HR and other team members.

Conclusion

During this period, I have worked across multiple areas of full-stack development and taken responsibility for development, integration, testing, security, deployment, and maintenance.

My experience has expanded significantly in **React, Node.js, Fastify, PostgreSQL, Supabase, Docker, Redis, Socket.IO, mobile application development, multiplayer systems, payment integrations, security, and production deployment**.

Going forward, I would like to take more ownership of complete modules and production systems, further improve system architecture and security, and contribute at a higher level to the company's upcoming software projects.
